DETAILED ACTION

Specification

Claim 20 is objected to because of the following informalities: the phrase "to be optically to said" makes no sense. The phrase "said first optical detector" lacks antecedent basis. Appropriate correction is required.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Wong et al (US 5062703).

Re clm 1: Wong et al discloses a method for measuring optical characteristics of a sub-component within a composite optical system, said method comprising: a) generating an optical response from said composite optical system (Col 2 lines 43-44) b) separating an optical response of said sub-component from said optical response of said composite optical system (Col 2 lines 52-54); and c) determining said optical characteristics of said sub-component by utilizing at least one portion of said optical response of said sub- component (Col 2 line 65).

Re clm 2: providing an input optical signal having a time-varying frequency (Col 5 lines 5-6)

Re clms 3,7-9: determining amplitude and phase of said optical response of said sub-component (Col 2 lines 65-68); detecting a reference phase of said input optical signal (Col 7 lines 34-35, Col 8 lines 37-40); and determining said optical characteristics of

said sub-component (Col 5 lines 65-66) by utilizing said amplitude and phase of said optical response of said sub- component and said reference phase of said input optical signal (Col 8 lines 52-57).

Re clm 4: the optical response is comprised of a heterodyne beat signal corresponding to said sub- component of said composite optical system (Col 3 lines 3-6)

Re clms 5,17: using a bandpass filter to separate from a plurality of heterodyne beat signals said heterodyne beat signal corresponding to said sub-component (Col 6 lines 53-59)

Re clms 6,18: utilizing orthogonal filters to determine amplitude and phase of said heterodyne beat signal corresponding to said sub-component (Col 3 lines 13-28)

Re clms 10,19: reflectivity and transmissivity (Col 5 line 65)

Re clm 11: a system comprising: an optical detector (Col 6 line 29), a filter (Col 6 lines 53-59) and a processing unit (12)

Re clm 12: light source (14)

Re clms 13-15: amplitude and phase (Col 2 lines 65-68)

Re clm 16: a plurality of heterodyne beat signals (Col 6 lines 37-40)

Re clm 20: first optical detector (16B) and second optical detector (16A)

Conclusion

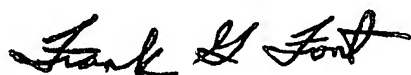

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wong et al 4921347, Klein et al 5293213, Ichihara et al 6456382 and Groot 6359692. Note: no IDS has been filed in this application.
